SAP Digital Manufacturing for SAP Business One

The integration between SAP Business One and SAP Digital Manufacturing is a pioneering move in the industry, bringing the most functional MES solution to small-mid market manufacturers!

Together, they provide a comprehensive solution for manufacturers to optimize various functions, including:

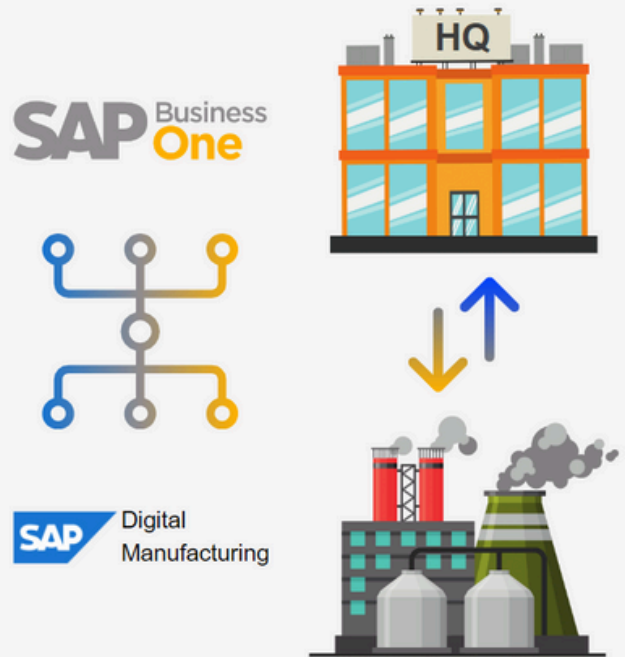

- Production planning & scheduling
- Inventory management
- Quality control

and a lot more...

The integration of MES & ERP is a significant step towards transforming traditional production into smart manufacturers via Big Data across business systems by integrating shopfloor operations.

This integration enables the exchange of transactional data, master data, and machine data between SAP Business One and SAP Digital Manufacturing.

With the emergence of digital technologies like IoT and AI, the global manufacturing industry has accelerated its transition to Industry 4.0. *Currently, the integration of SAP Business One and Digital Manufacturing is the most holistic solution enabling you to integrate all business processes under a single centralized platform!*

Smart Manufacturing with SAP Digital Manufacturing

1. Real-Time Analytics:

- a. Executive dashboards, supervisor analytics, and operator insights.
- b. Real-Time data collection allowing improved control and quicker responses to changing production needs.

2. Production Engineering and Planning:

- a. Streamline workflows, optimize resource allocation, and enhance collaboration.
- b. Predictive insights for demand forecasting.

3. Quality Management:

- a. Real-time monitoring and end-to-end traceability.
- b. Compliance with industry standards.

4. Maintenance:

- a. Predictive maintenance to prevent downtime.
- b. Asset health monitoring.

5. User Guidance:

- a. Role-based workflows and simplified training.
